## About Magnetek, Inc.

Founded in 1984 and headquartered in Menomonee Falls, in the Greater Milwaukee area, Magnetek is a NASDAQ listed company (MAG) specializing in the development, manufacture and marketing of digital power and motion control systems for material handling, people-moving, renewable energy and mining applications. Our power control systems serve the needs of traditional and emerging commercial markets that are becoming increasingly dependent on “smart” power.

## Magnetek is:

- America’s largest supplier of digital drive systems for industrial cranes and hoists. We provide Energy Engineered® drives, radio remote controls, braking and collision avoidance subsystems, motors and more.
- The world’s largest independent builder of digital motion control systems for elevators. We specialize in designing and manufacturing highly integrated Energy Engineered motion-control subsystems for elevators, serving the world’s foremost ‘lift’ builders.
- A provider of digital power interfaces that tie fuel cells, wind turbines and solar arrays to the utility grid.
- In underground mining, we focus on coal, building a new generation of digital drive systems that enable mining equipment to recover this resource for refinement to produce “clean coal” energy.

## Locations

- Menomonee Falls, Wisconsin (headquarters)
- Mississauga, Ontario, Canada
- Pittsburgh, Pennsylvania
- Canonsburg, Pennsylvania
- Milton Keynes, United Kingdom

## The Magnetek Team

We employ approximately 350 people including:

- Top power systems engineers, PhDs., designers, application experts and technical support personnel
- Certifications include: PE, IEEE, CPM, CPIM, CPA, PHR
- Numerous Patents
- Respected industry experts author industry white papers, serve as keynote speakers, conduct industry-wide training and serve on industry boards and committees

## World Class Service & Support

- Superior technical, applications and aftermarket support
- Highly trained team of technicians
- Full service on-site technical support

# Magnetek Manufacturing Overview

---

ISO 9001:2008 Certified Quality Management System  
(certificate of registration available)

UL, ETL and CSA Certified Facilities

- Including UL 508 approved panel shop

LEAN Capabilities and Techniques in use:

- Single Piece Flow Manufacturing Processes
- Kan Ban Replenishment Systems
- Standardized Processes
- Preventative Maintenance
- Value Stream Mapping
- Continuous Improvement Teams
- 5S System
- Flexible work force and formalized cross training program in place

Certified Six Sigma Green and White Belts on staff

105K square feet of production space

2 shifts

Onsite Failure Analysis Lab staffed with certified quality engineers

Onsite Test Engineering Lab staffed with Electrical Engineers and senior technicians
